

Lab WebBrowser

Step 1. 在 File>New>New File 開啓一個新的project, 選擇 View-based application

將project命名為 **WebBrowser**

Step 2. 在 WebBrowserViewController.h 裡, 加入 <UIWebViewDelegate> 來遵循 UIWebView 的protocol, 並且加入View上對應的物件以及我們會使用到的變數,還有三個 Button物件對應的IBAction

```
#import <UIKit/UIKit.h>
```

```
@interface WebBrowserViewController : UIViewController
<UIWebViewDelegate> {
    IBOutlet UIWebView *webView;
    IBOutlet UITextField *address;
    NSURL *url;
    UIActivityIndicatorView *spinner;
    UILabel *loadingLabel;
}

-(IBAction) pressGo;
-(IBAction) pressForward;
-(IBAction) pressBack;
@end
```

Step 3. 開啓 WebBrowserViewController.xib

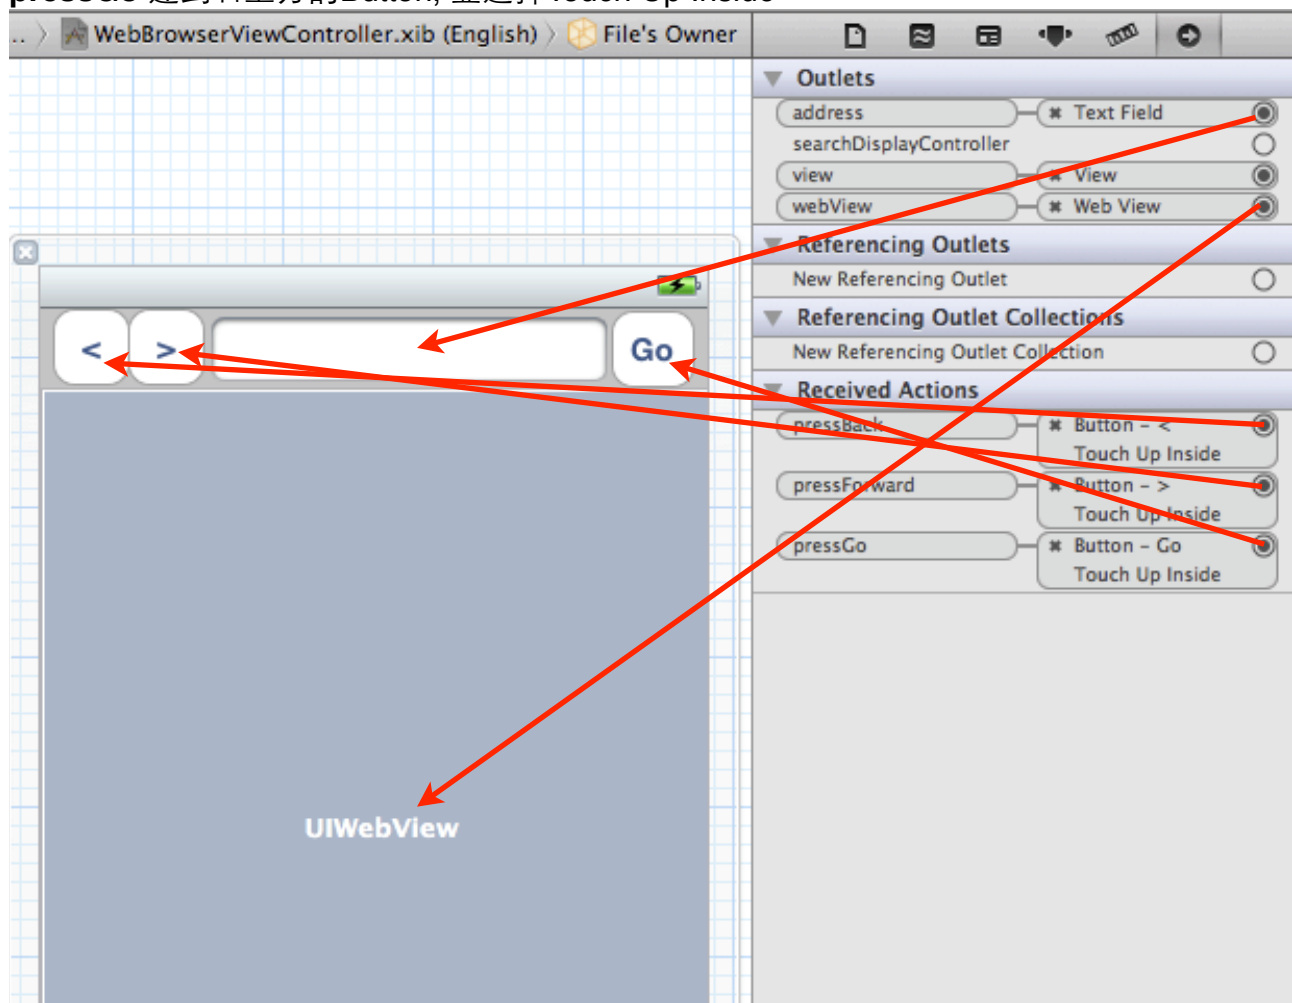

分別在左上方以及右上方加入三個Button,分別將Title命名為 “<” 以及 “>”, 以及 “Go”

在正上方加入一個UITextField

下方剩餘的空間加入一個UIWebView

Step 4. 同樣在 WebBrowserViewController.xib 並且將對應的物件還有IBAction做連結
address 連到正上方的UITextField
webView 連到下方的UIWebView
pressBack 連到左上方左邊的Button, 並選擇Touch Up Inside
pressForward 連到左上方右邊的Button, 並選擇Touch Up Inside
pressGo 連到右上方的Button, 並選擇Touch Up Inside

Step 5. 在WebBrowserViewController.m裡實作 pressGo{}, pressForward{} 和 pressBack{}

```

-(IBAction) pressGo{
    NSLog(@"Go");
    url = [NSURL URLWithString:address.text];
    [webView loadRequest:[NSURLRequest requestWithURL:url]];
    [address endEditing:YES];
}

-(IBAction) pressForward{
    NSLog(@"Forward");
    [webView goForward];
}

-(IBAction) pressBack{
    NSLog(@"Back");
    [webView goBack];
}

```

Step 6. 同樣的在WebBrowserViewController.m裡, 將 ViewDidLoad 這個Method的Mark去掉, 加入webView的預設值和Delegation

```
- (void)viewDidLoad {  
    [super viewDidLoad];  
    webView.delegate = self;  
    webView.scalesPageToFit = YES;  
}
```

Step 7. 同樣的在WebBrowserViewController.m裡,
加入 - (void)webViewDidStartLoad:(UIWebView *)webView{}
來當網頁正在Loading時, 顯示Loading字樣

```
- (void)webViewDidStartLoad:(UIWebView *)webView{  
    if (!spinner) {  
        spinner = [[UIActivityIndicatorView alloc]  
initWithActivityIndicatorStyle:UIActivityIndicatorViewStyleGray];  
  
        loadingLabel = [[UILabel alloc] init];  
        loadingLabel.text = @"Loading...";  
        loadingLabel.textColor = [UIColor grayColor];  
        [loadingLabel sizeToFit];  
  
        CGFloat totalWidth = spinner.frame.size.width +  
loadingLabel.frame.size.width;  
  
        CGRect frame1 = spinner.frame;  
        frame1.origin.x = (self.view.bounds.size.width - totalWidth) /  
2.0;  
        frame1.origin.y = (self.view.bounds.size.height -  
frame1.size.height) / 2.0;  
  
        CGRect frame2 = loadingLabel.frame;  
        frame2.origin.x = (self.view.bounds.size.width - totalWidth) /  
2.0 + frame1.size.width;  
        frame2.origin.y = (self.view.bounds.size.height -  
frame2.size.height) / 2.0;  
        spinner.frame = frame1;  
        loadingLabel.frame = frame2;  
  
        [spinner startAnimating];  
        [self.view addSubview:spinner];  
        [self.view addSubview:loadingLabel];  
    }  
}
```

Step 8. 同樣的在WebBrowserViewController.m裡,
以及 - (void)webViewDidFinishLoad:(UIWebView *)webView{}
當網頁Loading完成時,關閉Loading字樣

```
- (void)webViewDidFinishLoad:(UIWebView *)webView{
    if (spinner) {
        [spinner stopAnimating];
        [spinner removeFromSuperview];
        [spinner release];
        spinner = nil;

        [loadingLabel removeFromSuperview];
        [loadingLabel release];
        loadingLabel = nil;
    }
}
```

Step 9. Run (⌘+R)
